

PDF-7: Food Entity, Timing Logic & PG–Food Mapping

Purpose

This document explains the Food entity design in NammaPG, including food types, timings, special items, and its relationship with PG.

Relationship

PG ↔ Food is a One-to-One relationship. Each PG has exactly one food configuration.

Food Entity Fields

- Food Type (Veg / Non-Veg / Both)
- Eggs Provided (Yes/No)
- Breakfast, Lunch, Dinner availability
- Time windows for each meal
- Sunday Special & item name
- Weekly Sweet dish (day & item)
- Weekly kitchen closed (day)
- Included in rent
- Remarks & Active flag

Timing Logic

Each meal has a start and end time to represent the serving window (usually 2 hours).

ORM Mapping

@OneToOne mapping is used with Food as the owning side and PG as the parent.

Benefits

- Realistic PG food representation
- Easy UI display
- Extendable for future menu/pricing
